”Your floor is not just something you walk on. It is something you spend nearly every waking moment on, and it defines how both you and your visitors feel about your home and business. Whether you are trying to create a mood of simplicity, futuristic modernism, or classical elegance, your flooring sets the tone.”

— Gintaras Glicas, CEO

Designed Just for You

Each family of products is a dynamic collection of flooring, wall panels, and more that can be customized to virtually any use in both interior and exterior spaces. If you are a designer looking for a quality product that you can put your own signature touch on to create a unique design for each of your projects, we can come up with a solution tailored just for you.

If you are a private homeowner, business owner, or contractor working on a single project, we can help you achieve the perfect look. All products are uniquely made to order. We can duplicate what is in our showroom or adjust the color, grain, and spacing to your tastes. The only limits are what you can dream.

Factory

Our goal is simple: to provide luxury hardwood flooring that defines your home or business and improves the way you and your customers feel about it. We know that achieving this is a blend of matching customer tastes and providing the highest quality product, so we have built our manufacturing process from the ground up to focus on those attributes. No matter what you need, you can be assured that we will deliver a finished product that is built to last.

Quality Control

Our custom ordering process does not just get you a unique look. It also ensures unmatched quality. Each step of the manufacturing process is closely monitored by our skilled specialists.

Proven Track Record

We have been providing quality flooring for over twenty years to both private households and well-established businesses. In that time, we have delivered our products to over 22 countries. We would never have achieved international success without satisfying customers across the globe. Contact us to learn how you can join the exclusive club of fine European flooring.

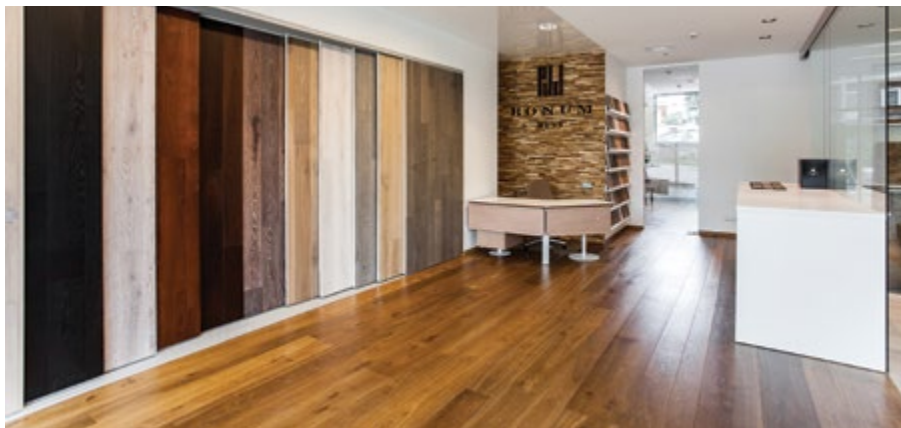

Environmentally Friendly

We also feel that we have a duty to help protect the environment. Since manufacturing engineered flooring does not waste valuable prized wood below its wear layer, for every 1 sq. m. of 19 mm thick solid wood flooring manufactured, we can manufacture approximately four times that amount into engineered wood flooring. Our production process is 100% environmentally friendly, and we use no chemicals. Instead, we rely on natural oil and lacquer. In addition, being Forest Stewardship Council (FSC) forest management certified company guarantees that our products meet the world's most stringent environmental, economic, and social standards for responsible forest management.

Showrooms

Our showrooms in each city are built to reflect local architecture, culture and lifestyles, and to express our belief in enhancing our customers' homes and offices. Every Bonum Wood showroom, as well as every product we make - whether for home or office - is distinct and one-of-a-kind.

PRODUCTS

Each **Bonum Wood** product is unique – because each is made to order. Every one of our fine wood floors is tailored to a customer, to match individual vision of how his home should look.

BONUM WOOD

PRODUCT INFORMATION

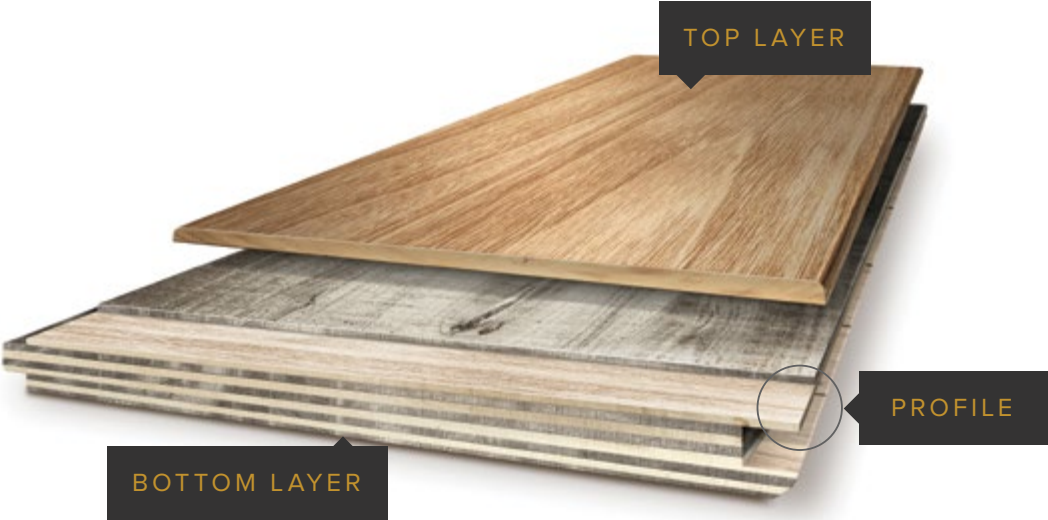

We use only the best products, the most advanced technology, and the finest craftspeople... and we create flooring of impeccable quality. We are so confident of our quality, in fact, that we guarantee it for a lifetime.

Construction

Engineered hardwood flooring

2-layer construction

More stable and humidity resistant in comparison to that of solid wood, engineered hardwood does not shrink or expand as much as the solid wood, making it resistant to warping and cupping. Ideal for below-grade installations where slight dampness is common, Bonum Wood engineered flooring can be used anywhere inside. Our engineered hardwood can be installed over radiant heating systems, in bathrooms and even in laundry rooms. With a 4 mm or 6 mm dry sawn top layer providing a great resistance to everyday wear-and-tear, our engineered hardwood flooring comes with a lifetime warranty.

Dimensions, mm:	Thickness	Width	Length
Standard	15-19	140-300	1400-3000
Herringbone	11-15	70-120	490-600
Chevron	11-15	120	480
Parquetry	15	600	600

TOP LAYER

The top layer (lamella) is made of dry-sawn solid hardwood and is available in different wood species, surface treatments, and finishes.

Thickness:	4 / 6 mm
Finishing:	Natural Hardwax oil or natural lacquer
Bevel:	None, 2-side, 4-side

PROFILE

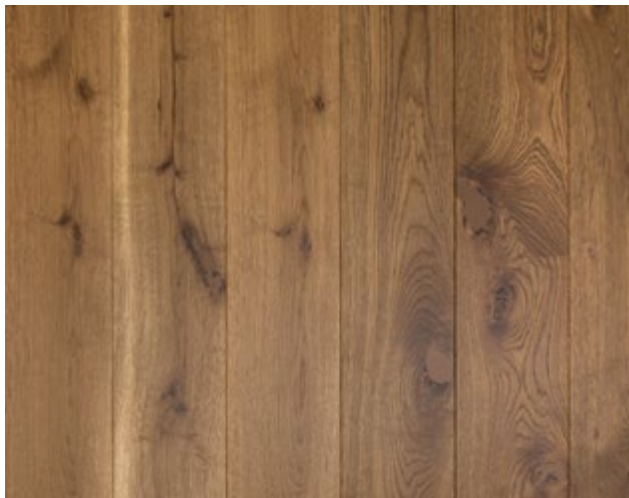

Tongue and Groove

BOTTOM LAYER

This layer is made of water resistant Baltic birch multiplex plywood. Wood layers are positioned with their grains in opposite directions at 90° angle to minimize expansion and contraction under the influence of humidity and temperature changes. Plywood is three quarter sawed for an even better stability and lower wood tension.

Thickness:	11 / 15 mm
Layers:	9 or 11
Class:	3 / 3

Grade Specification

RUSTIC

A grade characterized by wood pattern. Discoloration and internal sapwood is permitted without restrictions.

White sapwood at the board edge $<1/3$ of the board width, can go across the entire length of the board.

Fallen knots $0 < 80$ mm are allowed, by gluing natural knots in their places.

Cracks < 5 mm are allowed over the entire length of the board.

All defects are filled with a wood filler (polyamide) or putty.

CLASSIC

A classic and the most popular grade. Significant discoloration is allowed and to be expected for this grade. No restrictions for internal sapwood.

White sapwood at the edge of the board < 15 mm wide and $< 1/3$ of the board's length.

Whole knots of $0 < 50$ mm are not limited.

Fallen knots $0 < 40$ mm, by gluing natural knots in their places.

Cracks < 2 mm wide and 5% of the board length are allowed.

Cracks in combed and heat-treated parquet wood < 3 mm wide and $< 10\%$ of the board length are allowed.

All defects are filled with a wood filler (polyamide) or putty.

SELECT

This is a premium grade. The timbers selected are defect and split free. Wood has uniform, characteristic colour, without significant changes. There are no restrictions for a wood pattern.

Healthy knots: $0 < 10$ mm not in groups.

Cracks in combed and heat-treated parquet wood < 1 mm wide and $< 2\%$ of the board length covered with special wood putty are allowed.

SELECT PLUS

Only the highest grade, uniform walnut wood is used for this grade. The timber selected is free of any defects, knots, sapwood or cracks.

Warranty

WHAT IS COVERED?

Limited lifetime structural integrity warranty. **Bonum Wood** is dedicated to providing the clients with products of superior quality. It is our aim to secure the highest quality standards as well as to prolong the lifetime of our products. Our floors have a unique surface, which lasts a lifetime with the right care. **We guarantee that our products are free of the following defects: twists, bends, milling or structural defects, delamination or bows.**

Limited lifetime finishes warranty. **We guarantee that our oil, hardwax oil and lacquer finishes will not crack, flake, peel or blister for the lifetime of the floor.** These finishes are water-repellent, dirt resistant, and washable and are resistant even to excessive wear and most liquid spills. Our oil-finished floors must be maintained to provide maximum protection and luster and are meant to be periodically re-oiled. We recommend using specially formulated floor care products to preserve flooring. Use of floor care or sundry products other than those we recommend for use with our flooring products may damage a floor and void this warranty.

Download **Bonum Wood** “Limited Warranty Terms and Conditions” document for full details on bonumwood.com/support/warranty

LIFETIME	Residential
7 YEARS	Commercial

Installation

Bonum Wood hardwood floors are designed to be used for a wide variety of projects, both commercial and residential. Our floors can be installed:

- on, below and above ground level
- over a variety of sub-flooring, such as concrete, plywood, OSB sub-floor, and others
- over underfloor and with other heating systems
- in bathrooms, kitchens and laundry rooms

There are three different ways our products can be installed: glue-down, staple/nail-down, and floating installation. Though a self-installation is possible, it's not recommended. Making mistakes can be costly and difficult to fix.

Please take the time to read through **Bonum Wood** installation instructions before beginning, improper installation is likely to void warranties. See instructions on bonumwood.com/support/installation

Maintenance

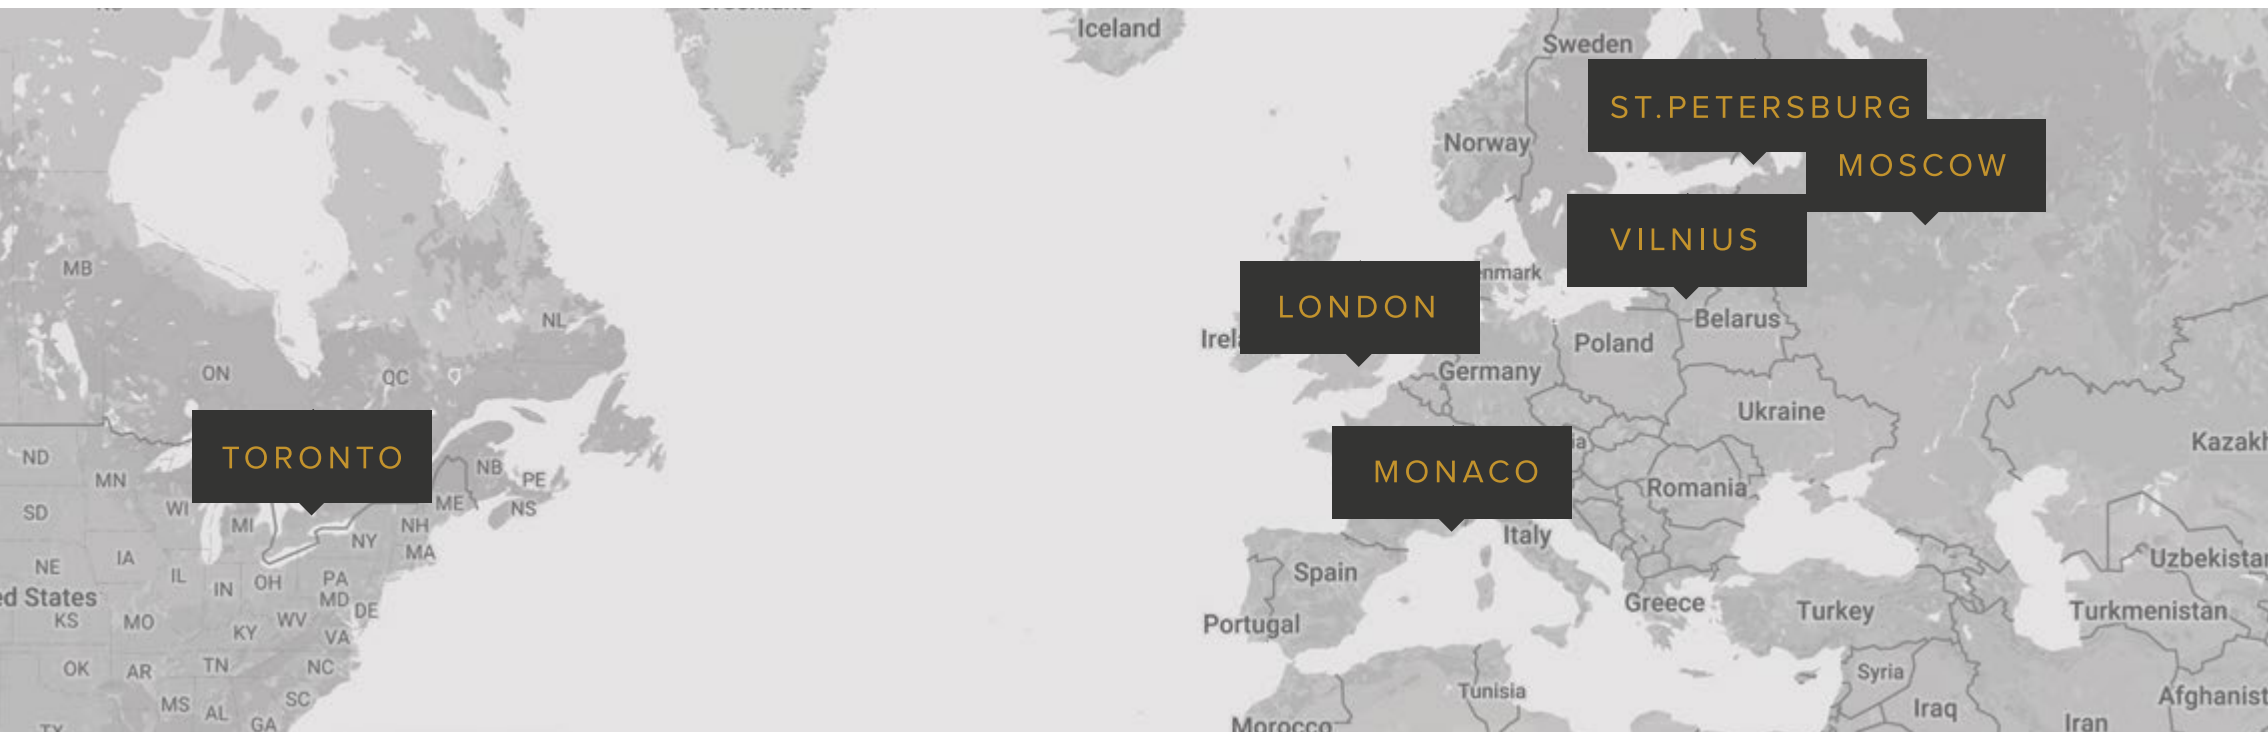

Dedicated to providing our clients with superior level hardwood flooring, **Bonum Wood** takes pride in delivering high-quality products and services. Nevertheless, like most floors, our hardwood flooring must be well maintained in order to achieve longevity. Made from a natural hardwood and finished with natural products, **Bonum Wood** floors are super simple to care for and safe for prolonged and vigorous use. The cleaning and maintenance frequency depends on user intensity.

For regular cleaning of hardwax oiled floors, we recommend to use **EASY CARE** cleaner once a week. The floor balsam helps to keep a natural and uniform wood floor appearance.

For periodic maintenance use **PRO CARE** cleaner every month or every two months. It is used for intensive cleaning of wooden floors treated with natural oil and it easily removes the toughest stains.

Maintenance procedures for hardwood floors are fully outlined in our “Bonum Wood Maintenance and Repair Instructions” guide on bonumwood.com/support/maintenance
